- ✓ xls
- ✓ XML
- ✓ Webservices

Integration Snelstart:

- ✓ Snelstart webservices
- ✓ Orders
- ✓ Customers
- ✓ Articles
- ✓ and many other web services if available in Snelstart

• OMNIMOVE

OmniMove has over 15 years of experience developing applications for mobile workers. With MobileForms, OmniMove offers an accessible, comprehensive solution via a web portal, allowing flexible automation of various forms.

Over 2,500 applications have been developed and over 8 million forms have been processed. These forms were completed online or offline on a mobile device and sent to the portal or other software application. In addition to the ability to easily send all digital forms as PDFs via email, OmniMove MobileForms also offers comprehensive reporting and API/data source connectors for integration with other software applications.

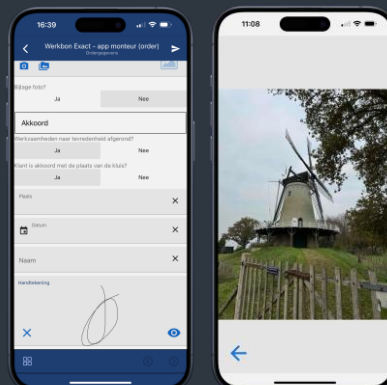

The OmniMove MobileForms app is available in the Android Play Store and Apple App Store.

THE 3 STEPS

With OmniMove MobileForms, your paperwork becomes digital in just 3 steps!

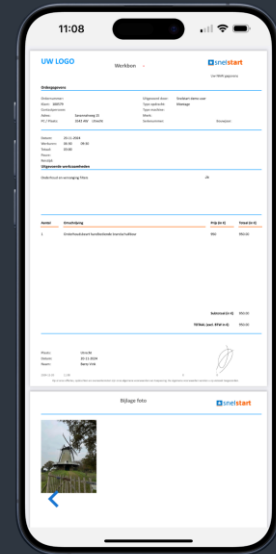

STEP 1 : IMPLEMENTATION

We customize the Snelstart work order template (or other application) specifically to your needs so it fits seamlessly. During the setup, we ensure that as much information as possible is automatically filled in, and only the necessary data needs to be recorded. After that, you can start using the app right away. During a personalized tutorial on the platform, we'll explain how the template was designed using the form builder. After that, you can make changes and implement new applications yourself. Creating your own application for an app has never been easier.

STEP 2 : DAILY USE WORKORDER APP

You can now retrieve data from Snelstart and record it in the app. This can include various components such as time tracking, activities performed, inspections, photos, and signatures. Only the necessary information needs to be entered. Because the app also works offline, you can enter data anywhere. Recording data has never been easier.

STEP 3: REPORTING

After submitting the work order, the new order is automatically (or updated) in Snelstart. Double data entry is a thing of the past! Each form specifies how it should be processed. For example, by sending a report via email with a PDF attachment, in your own corporate style. The data is always available in the portal but can also be automatically transferred to your own administration (via web services or SFTP in CSV or XML format). An Excel export is also possible to support your own analyses.
