OmniMove MobileForms is suitable for any application.

## • INTEGRATION

API / Datasource integration via:

- ✓ csv
- ✓ xls
- ✓ XML
- ✓ Webservices

Standard integrations with:

- ✓ Snelstart
- ✓ Exact
- ✓ E-Boekhouden
- ✓ InformerOnline
- ✓ Webfleet
- ✓ Relatics
- ✓ ... and many others

## • OMNIMOVE

OmniMove has over 15 years of experience in applications for all employees who are frequently on the road. With MobileForms, OmniMove offers an accessible total solution via a web portal so that all kinds of form applications can be automated in a flexible way.

More than 2,500 applications have been developed and over 8 million forms processed. These have been filled out on a mobile device online or offline and sent to the portal of an other software system. Added to the ability to easily send all digital forms in PDF format via email, OmniMove MobileForms also offers extensive reporting and options to deploy API / data source connectors for an integration with other software systems.

The OmniMove MobileForms app is available in the Android Playstore and Apple Appstore.

## THE 3 STEPS

With the OmniMove MobileForms, you make your paperwork digital in just 3 steps!

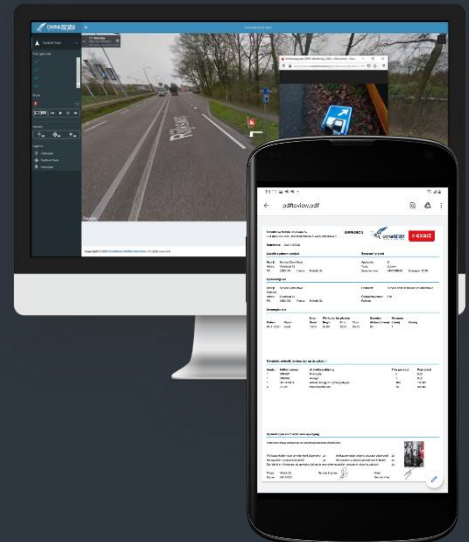

### STEP 1 : BUILDING A FORM

The form is created with the formbuilder. We search in the library of over 2500 applications for the best template for your company. We adapt this template specifically to your requirements so that it fits seamlessly. During the build we make sure that as much information as possible is filled in automatically and that only the necessary data needs to be registered. After this you can start working with the app right away. During a personal instruction of the platform we explain how the template is designed via the form builder. After this you can make changes and create new applications yourself. Creating your own application for an app has never been easier.

### STEP 2 : REGISTER

You can now retrieve and record data in the app. These can be different parts such as time records, activities, inspections, photos and signatures. Only the necessary data needs to be filled in. Because the app also works offline you can enter the data anywhere. Recording data has never been this easier.

### STEP 3: REPORTING

After submitting the form, the data is automatically processed. Double data entry is a thing of the past! For each form it is defined how it should be processed. For example, by e-mail including a PDF attachment in your own company style. The data is always available on the portal but can also be automatically forwarded to your own administration (via web services or sftp in csv or xml format). Of course, an Excel export is also possible to support your own analyses.
